

STATE AND LOCAL MITIGATION PLANNING
how-to guide

Getting Started

building support for mitigation planning

contents

foreword	i	
introduction	v	
STEP ONE assess community support	1-1	
task a determine the planning area	1-2	
task b determine if the community is ready to begin the planning process	1-3	
task c remove roadblocks	1-5	
STEP TWO build the planning team	2-1	
task a create the planning team	2-2	
task b obtain official recognition for the planning team	2-8	
task c organize the team	2-8	
STEP THREE engage the public	3-1	
task a identify the public	3-2	
task b organize public participation activities	3-3	
task c develop a public education campaign	3-6

appendix a glossary	a-1	
appendix b library	b-1	
appendix c worksheet	c-1	
appendix d example questionnaire	d-1	

the hazard mitigation planning process

Hazard mitigation planning is the process of determining how to reduce or eliminate the loss of life and property damage resulting from natural and human-caused hazards. Four basic phases are described for the hazard mitigation planning process as shown in this diagram.

For illustration purposes, this diagram portrays a process that appears to proceed sequentially. However, the mitigation planning process is rarely a linear process. It is not unusual that ideas developed while assessing risks should need revision and additional information while developing the mitigation plan, or that implementing the plan may result in new goals or additional risk assessment.

organize resources

From the start, communities should focus on the resources needed for a successful mitigation planning process. Essential steps include identifying and organizing interested members of the community as well as the technical expertise required during the planning process.

assess risks

Next, communities need to identify the characteristics and potential consequences of hazards. It is important to understand how much of the community can be affected by specific hazards and what the impacts would be on important community assets.

develop a mitigation plan

Armed with an understanding of the risks posed by hazards, communities need to determine what their priorities should be and then look at possible ways to avoid or minimize the undesired effects. The result is a hazard mitigation plan and strategy for implementation.

implement the plan and monitor progress

Communities can bring the plan to life in a variety of ways ranging from implementing specific mitigation projects to changes in the day-to-day operation of the local government. To ensure the success of an on-going program, it is critical that the plan remains relevant. Thus, it is important to conduct periodic evaluations and make revisions as needed.
